

Dear [insert name if given in advertisement]

I am writing to apply for the internship position in software development and technology in [company name].

I am a third-year student of Computer Engineering at Trinity College Dublin and my aim is to become a full stack developer after my studies. I am interested in this position as it offers the opportunity to combine my enthusiasm for working as a developer with my proven programming skills, group working and communication abilities that I have displayed in my projects and work experience to date.

I have learned a range of programming technologies throughout my studies and have completed projects using Java, Python and C++. I have further developed my Python skills by taking part in Kaggle competitions in my spare time, and I have Java experience from building a search engine using Maven for a personal project. I would welcome the opportunity to learn what it's like to work in an Agile environment and to participate in SCRUM software development that this internship offers.

I am particularly interested in working at [company] because I am eager to develop my technical and professional skills and I know you offer excellent in-depth training and career development opportunities to your staff. I am impressed with the work of your technology group who develop innovative products for Desktop, Mobile and Cloud and would like to contribute to this work. I also know that you encourage staff to volunteer in the community, and as a Student2Student mentor in college I have a demonstrated interest in volunteering my time and supporting those around me. I believe that I would be a good fit for this role and for your company.

Thank you for taking the time to review my application,

Kind regards,

Name
